

FSC Procurement Policy

We at Forta PRO are very proud of our environmentally friendly and sustainable production. By encouraging our clients to choose Forest Stewardship Council (FSC) certified timber, we support environmentally appropriate, socially beneficial and economically viable management of the world's forests.

During contract negotiations we emphasize the importance of using FSC certified timber and joinery and promote choosing it over non-certified. This includes all solid timber and timber provided for temporary works, with a preference given to non-solid timber also being certified. If client requests wood-based products endorsed by FSC, our Procurement Department ensures his/ hers needs and expectations are fully met.

If FSC certified timber is needed, all contractors are expected to provide relevant chain of custody certificates prior to timber being delivered to production and construction site. When delivered, our highly experienced Quality Controllers verify if all the relevant documentation is attached.

To ensure the best performance towards the environment we at Forta PRO are running Environment Management System according ISO 14001.
